### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James E. Howard on 2/9/2006.

The application has been amended as follows:

- In claim 1, line 14; --a processor on-- has been inserted after "to."
- In claim 1, line 15; --said processor on-- has been inserted after "to."
- In claim 9, line 2; "a" has been changed to --said--.
- Claims 5, 14-17 have been cancelled.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

- With regard to independent claim 1, as the closest reference on record, the combination of Takao et al (JP 5-81846A) and Bemis (US 5,487,160) discloses a magnetic disk apparatus including: a disk enclosure, a first printed-circuit board, which is paired with the disk enclosure, and a second printed-circuit board, which is detachably connected to the first printed circuit board; wherein each of the plurality of first printed-circuit boards mounts circuits which have a first noise resistance property, and the second printed-circuit board mounts circuits which have second noise resistance property, the second noise

Art Unit: 2656

resistance property is superior to the first noise resistance property; wherein the second printed-circuit board is detachably connectable to an upper system, and wherein the first printed circuit board includes recording/reproduction control circuit; **but fails to show** that the circuits on the second printed-circuit board includes a switch for selecting either of one of the first printed-circuit boards simultaneously connected to a processor on the second printed-circuit board and another of the first printed-circuit boards connected to the processor on the second printed-circuit board.

- Applicant asserts: the present invention has been made to “reduce the unit cost of a magnetic disk apparatus by dividing a printed-circuit board into function blocks and mounting only a circuit for holding parameters unique to a disk enclosure and circuits which are poor in noise resistance property on the printed-circuit board which is combined with the disk enclosure” and “miniaturize a magnetic disk apparatus and to provide a form of the magnetic disk apparatus which is not restricted by form factors” (Specification, p. 3).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tianjie Chen whose telephone number is 571-272-7570. The examiner can normally be reached on 8:00-4:30, Mon-Fri.
